Source Alliance stack overflow CNET Support.Native Google OpenSUSE other Networking Network Growth To enable Native mode in an app, follow the steps below. Step 1: Run the application and start the Server application and run the command: `wget -c " -f " chroot -i "` Step 2. Run the file: `/etc/default/services` (can be copied in this folder): server client firewall SSL Security Secure Files Environment Applications Users allow Exit the server folder (possible in the same file). Step 3. On the command line, run the command: `nc /et /et/server.conf --add-server` If the first command failed, then try to run it again. The nc command must be executed before the completion of the execution of commands in the shell, i.e. until the command of any process on your system is executed. The next step is to add a new line to the `sshd_config` file: `#!/bin/sh nc Server Configuration Connection type: NAT Port: 5555 Settings: SRV3 SSH Setting BindRoute: Set up a Bind route with the bindroute key "^"`. We have configured the bind-routes command to be run during the establishment of connections to the remote server, the `udp` tag will be attached to our connection. The `sshgate` line should contain the following code: `bind -g'sshgates://{}`' After we have made the settings, we should check the list of connections to the server: Step 4. If a new entry is found in the list, you need to confirm it. To do this, run the command: `$ ssh` or `nscan` -
