Subsonic.com Subsonic is an open-source, cross-platform streaming audio server application. For more details on the Subsonic app for Mac OS X, and how to use it to stream audio to your Mac, iPhone, or other devices, please visit our website at: Subsonic.com App Review: The main window of the app is divided into two panes: the left side displays the contents of the currently played or last played song, album, or playlist, while the right side gives you quick access to play controls. This simple layout makes it easy to jump to playing a particular song, album, or playlist, or to pause/play your audio. The main app is fairly easy to navigate, but there are some aspects that can be improved. The window navigation buttons could have better labels, and there's no obvious way to select an entire album. The main window is divided into a number of panels. The first panel in the main window, for example, provides a quick access menu to switch from the currently played song, to the play controls, to the album, playlist, and other panels that the app provides. Up until now, we haven't been able to find out whether you can customize the app's main window, so if that's something you want to do, we recommend that you contact the developer. However, there are a few things that you can do to tweak the main window's layout, using the app's preferences. Subsonic's main menu panel The panel on the left side of the main window is where you'll find the main menu. It contains the following options: Playlist: This opens the playlists panel, which shows you all the playlists you have created. Add playlist: You can add a new playlist from this panel. Albums: This panel shows you all of the albums you have created. Add album: You can add a new album from this panel. Play: This opens the playlist panel. Stop
