Two words first: It can make it easier to figure out what we have by its list of available modules. For example, many times we might want to know whether a document class exists or a particular data type or function. Additionally, using this lookup capability I can get acquainted much more easily with the nomenclature, which I really prefer because I would like to see what we can do before I select one method or another. Here is a list of some of the stuff we have in the More Matlab Modules section: Image Processing and Computer Vision - Search this site's pages to locate our documentation on Image Processing and Computer Vision. M is the name of the software environment that can be used to run MATLAB with graphical user interfaces or batch processing. This environment is available for Windows, Macintosh, and Linux systems. MATLAB® 7.0 and later supports a number of options that are accessible using the command line. These options include the ability to create a shortcut to MATLAB and the ability to install the MATLAB tools. What is MATLAB? MATLAB® is a proprietary environment that provides a set of tools and packages for numerical computing and mathematical visualization. This environment provides a set of commands, called M-files, that can be used to solve a wide variety of mathematical problems. MATLAB is commonly used in the areas of scientific and engineering applications. MATLAB provides a wide variety of commands and tools for performing numerical analysis, plotting data, and statistical computing. Graphical tools are available for several types of visualization. 3e33713323
