⬚ Data / Schema View and Schema Compare let developers quickly identify schema changes and accurately predict the effects of their schema changes on existing code. You also get more control over your schema and data while working in a database environment. ⬚ Refactor easily change a schema by migrating a database to a new schema, adding or modifying data, and so on. ⬚ The refactoring tools in Visual Studio Team System Database Edition allow you to easily refactor a database to a new schema and automatically generate the necessary scripts. As a result, you can quickly create and develop new applications. ⬚ The Data / Schema Compare feature, in the recent versions of Visual Studio Team System Database Edition 2008, allows you to compare objects in both database projects and in projects with no database connection. ⬚ The Data Generator Wizard generates a schema that can be used for data migration, creating tables or data sets, as well as copying schema information and data between database projects. Microsoft Visual Studio Team System 2008 Database Edition Power Tools Free Download Description: ⬚ Dynamic Data enables you to rapidly test your application logic and data models and then build application logic, data models, and validation rules without code generation. The ability to create a database automatically based on a model or from existing database sources enables you to create a new database from a current one, test your application logic and database models in the same environment, and test and validate the database schema. ⬚ Graphical model for data in database and an interactive UML dialog for working with your data models. ⬚ Creating a Database Model and View (MDDV) is a new project type in Visual Studio Team System Database Edition 2008 that you can use to create a new database without writing the necessary DDL scripts. ⬚ Create Model From Existing Database (SSMDV) lets you easily create a database model from an existing database, import objects or database schema from an existing database, create a database model from a SQL query, and so on. ⬚ New Test Conditions for Database Unit Tests ⬚ ExpectedSchemaTestCondition � You can use this test condition to verify that the column names and data types of the returned data set match expected values. ⬚ New Data Generator Wizard � This new wizard creates a data generation plan that is configured to copy data from a source database. You can use this wizard when you need to copy most of your data from a live source, but need to
