Xref The AutoCAD Xref plugin is used for "Xref" or "Xref Edit". This feature allows adding or altering drawings, or adding and changing components and attributes in the drawing. It is available as a plug-in, an add-in or part of AutoCAD. Linking AutoCAD is linked with other programs, such as Autodesk's Maya or 3ds Max. This is done by using the plugin System Link. In addition to this, other major 3D CAD software programs are capable of importing/exporting to AutoCAD, including Autodesk Revit, Blender, PTC Creo, SAP Advanced Manufacturing Studio, Dassault Systèmes CATIA V5, SolidWorks, Trimble VX Team, Stereolithography, Maya, Rhino, Unigraphics NX. With the release of AutoCAD 2012 and 2013, AutoCAD was directly linked with Blender via the plugin "Export to AutoCAD", however, this is not available in AutoCAD 2014. Compatibility AutoCAD is available for Microsoft Windows, Mac OS X, and Linux operating systems. It can also run on the Apple iPad and iPad mini, as well as on the Apple iPhone. AutoCAD 2011 can read DWF files from 3DS Max and Revit. Revit can export to DWF. There is also an external converter called DIW, which is compatible with Revit, which can convert DWF to DGN and DGN to DWG. On February 11, 2013, Autodesk released a version of AutoCAD for Android devices. AutoCAD LT is not compatible with Windows Vista or earlier versions. It is the older version of AutoCAD in which AutoCAD LT is included. The software supports the following rendering engines: Direct3D OpenGL OpenGL via OpenGL Shading Language OpenGL Shading Language via DirectX Tool Kit DirectX DirectX via C++ Toolkit OpenGL OpenGL via Graphics Processing Unit (OpenGL for Embedded Systems - OpenGL ES) OpenGL for Embedded Systems OpenGL ES GLUT The first version of AutoCAD to support Adobe Photoshop file format was AutoCAD 2009. There are additional versions available since, including the following: AutoCAD 2010 AutoCAD 2010 R15 AutoCAD 2011 AutoCAD 2012 AutoC a1d647c40b

The items are loaded from a web service and I am using an adapter to populate the listview. I want to change the background of the items when I select the items in the listview. I tried using listView.getSelectedItem().setBackgroundResource(R.drawable.selected_bg); but it doesn't work. I am setting the listview's background in the code. Thanks in advance for your help! A: If you want to use selectors you need to define a selector file. It could be as simple as: The important part is the last line. Then you would be able to do this in the getView() method of your adapter: holder.itemView.setBackgroundResource(R.drawable.bg_selected); Also have a look at this answer. #ifndef CAFFE_EMBED_LAYER_HPP_ #define CAFFE_EMBED_LAYER_HPP_ #include #include "caffe/blob.hpp" #include "caffe/layer.hpp" #include "caffe/proto/caffe.pb.h" names

What's New In?

The new Markup Assistant tool—available for editable images in both AutoCAD and DWF formats—provides an intuitive way to create markup labels for your drawings. Add and remove labels with a single click, select to copy or delete the label from the design. (video: 1:12 min.) Improvements to Rotate tool: The Rotate tool now remembers its last setting for object, text, and point rotation, and you can directly set the angle of rotation. Constraint Delineation: Continuous constraint lines, such as walls, are created automatically based on the direction and distance that are entered in the constraint window. The best way to add a wall to a design is to specify the length of the wall in the constraint window, and let the tool automatically determine the orientation of the wall. Scaling tool improvements: When you enable the Scale tool, you can adjust the whole drawing to a new scale as a whole, including dimensions, units, and annotation text, without having to change the scale for each object individually. For a live demonstration of these new features, and to see them in action, watch the video.
