Q: Passing an array to a bash script and accessing the array in the script I have a bash script: `#!/bin/bash`

`TEST_ARRAY=(/home/a/b/c/new.txt /home/a/b/d/new.txt) # Access the content of the array echo ${TEST_ARRAY[0]}` The problem I'm having is that when I run the bash script, bash gives me the following error: syntax error near unexpected token `new.txt' It works fine if I change the array to: `#!/bin/bash TEST_ARRAY=/home/a/b/c/new.txt /home/a/b/d/new.txt # Access the content of the array echo ${TEST_ARRAY[0]}` but that means I have to change the script to something like this: `#!/bin/bash TEST_ARRAY=/home/a/b/c/new.txt /home/a/b/d/new.txt # Access the content of the array echo ${TEST_ARRAY[0]}` which is not what I want to do. How can I fix this so I can access the content of the array in my script without changing it?
