VirtualDubMod Surround [Win/Mac]

VirtualDubMod is an application that you can use to convert and modify settings in video files. This tool does not require installation, so it is portable. You can place it on an external device and run it on any computer. More importantly, there will be no changes made to your registry entries. The interface of the program is plain and simple. You can import media by using the file browser or the "drag and drop" method. Batch processing is not supported. So, you can attach segments of a clip, preview the VBR, input and output stream, as well as convert video to the AVI, OGM or MKV format. In addition, you can view file information, save as striped AVI, take snapshots, save processing settings, start a frame server and run a configuration script. Furthermore, you can use the "cut", "copy" and "paste" functions, go to the beginning, end or a particular frame of the video, as well as set the selection start and end. Plus, you can apply various filters, such as blur, deinterlace, emboss, field swap, brightness and contrast, flip, grayscale, general convolution, HSV adjust, resize, rotate, smoother and sharpen. Moreover, you can configure video frame rate control (source rate adjustment, frame rate conversion, inverse telecine), set the color depth, choose video compression, select the range of video to process, as well as enable direct stream copy, fast recompress, normal recompress or full processing mode. VirtualDubMod also lets you copy the source frame to clipboard, scan the video stream for errors, view a stream list, video comments and chapters, configure performance and dynamic compilation options, allow video overlays, and more. The software uses low-to-moderate system resources and includes a detailed help file with snapshots. It crashed once during our tests when attempting to open an AVI file. When you apply filters, you cannot view results in real-time. All in all, VirtualDubMod is definitely a software worth taking into consideration. But it should make some improvements regarding the interface. Otherwise, we mainly recommend VirtualDubMod to power users, since it comes with advanced settings. VirtualDubMod is a video conversion tool. It is a simple tool to convert video files in popular video formats to another video format. It supports converting video files into AVI, MP4, MOV, MP3

If you want to install it to a pen drive or another removable disk, follow the link The problem, some say, is that we've become a nation of snacking junkies—staring at screens, crushing snack packs and gorging on vending machine staples like pizza and potato chips. Are we really that used to junk food? Or do the eating habits of a culture reflect the way we live? "Americans really need to eat more healthfully and more frequently," says Pamela S. Locke, PhD, professor of nutrition science at Washington State University and author of the book *Fast Food Follies: The Fast Food Industry's Love-Hate Relationship with America*. "Instead, we have really shifted the focus of food in our culture to being something that is ingested and then avoided." But can we really be that bad? Are we really that fat? Does the fact that a person has a low-fat diet affect his or her ability to eat junk food? The answers are not as simple as they may seem. Yes, we are fat. (Actually, we're not exactly fat, says nutrition professor Locke. We're more like short and chubby.) "We are the fattest people in the world," she says, citing data from the U.S. Department of Health and Human Services. But wait. There's a problem with that statistic, says Locke. The data refer only to U.S. adults, not to children. And although we may be the world's fattest adults, according to Locke, we are actually light-years behind other countries in terms of childhood obesity. "That's the big problem," says Locke. "We have a lot of potential to change the course of the obesity epidemic. It's just that people have not really begun to change their eating habits. A lot of people say they want to eat better, but they still eat the same things." Eating habits are reflected in food consumption, says 1d6a3396d6
