Raster (Image © AutoDesk) Image Credit: AutoDesk History AutoCAD, originally called Release 1, was developed by Chris Brinkman and John Walker. The original inspiration for AutoCAD was designed to allow users to produce architectural floor plans using off-the-shelf drafting accessories from hardware manufacturers. The platform was designed to run on the MITS Altair 8800, a personal computer developed by the MITS Altair division of General Electric. The Altair 8800 was programmed using the languages B68 BASIC and then C. For the graphics engine, the team made use of the machine's native word-processing feature, Display Block, and the existing graphics primitive, the character. An early milestone of AutoCAD Release 1 was the ability to draw a box by dragging a character (in this case, the "v"). The final milestone of AutoCAD Release 1 was that it was capable of drawing wireframe. This milestone was realized by using the Altair's built-in frame buffer, consisting of two 8Kx8K bytes of real-time RAM. The frame buffer allowed the developers to connect the drawing to the Altair's built-in screen and bitmap display hardware. The frame buffer and screen hardware was so basic that the developers elected to use the screen for the drawing surface, as it would enable them to use the frame buffer as an offscreen memory buffer for the model. The wireframe surface was tiled (i.e., not textured) and so mapped directly to the frame buffer. Release 1.0 Raster – 1982 Flex – 1986 Windows-based systems – 1990 AutoCAD LT – 1997 AutoCAD Architecture – 1998 Concepts – 1999 Forums – 1999 D-Base AutoCAD was eventually released in December 1982 on a combination of a simple text editor and floppy disk. This release, Raster, could draw at 200dpi at a maximum resolution of 800x600 dots per inch. There was no support for the display of numbers or scientific symbols, and no basic drawing tools were included. The program was originally priced at \$1,000, including the disk and text editor. The original client/server architecture had a price tag of \$2,000 per installation. Features In this first release, the program provided the following features:
