Linux/Kernel type v2.6.38-51.3-default.6GB VMware ESXi 4.1 ISO 29.7 MB The following section discusses how to obtain this and other necessary software packages. The following section discusses the installation and configuration of the hardware. For information on obtaining the ISO files, see Appendix A: Downloading Cisco CUCM Software. To obtain VMware ESX 4.1 for your host computer, please follow the Our provider has a fairly extensive VMware training curriculum that covers all the most important features of the product including the basics of common usage, installation and configurations, configuration of a single virtual machine and a distributed cluster, special features, and more. Before we test the main server's health, we're going to visit the central router's configuration to identify the problems. Since this is a physical unit, it should be a cisco 2960 series, which is capable of running CUCM. There are four vms running. Other than the expected phone (vcsm), we have a system-wide unified address translator (uat) which we'll use to collect packet test results. Brief overview of the configured DHCP range. We need to make sure all the devices are able to communicate. We will start by configuring IPs in order of increasing address ranges. For the central node with IP 192.168.1.1, we will set the gateway to 192.168.1.201: For the first node, we will set the gateway to 192.168.1.200: For the second node, we will set the gateway to 192.168.1.254: For the second node, we will set the gateway to 192.168.1.253: For the third node, we will set the gateway to 192.168.1.252: We will set the address of the virtual server service instances to 192.168.1.111: Interface mgmt-0 will be used to access management interfaces. This will be the default management interface: Interface mgmt-1 will be used for management interface. This is the default management interface, interface mgmt-6 will be used to collect the packet test results: Note: the mobile service instances are running on interfaces that are not configured here. The next thing we need to do is configure the static routing on the central router. First, we will create the static route: To accomplish this, we need to create the table:
