In the current version of Photoshop (CS6 and later), a very visual tool has been added to the original layers, which are now arranged in squares called Panels. The Photoshop user interface (UI) no longer displays text, unlike the previous releases. A Photoshop Tutorial of Everything: A Few More Tips on Getting Started Unless you're an absolute beginner, it's likely that you've spent several years with Photoshop — over that time, you may have accumulated many different color schemes and effects that you use regularly. In addition, you may have developed your own personal style or preferred methods of achieving a certain effect. When you first start using Photoshop, it may take some time to set up a full color scheme from scratch. In this section, we cover the basics and offer some helpful tips. Considering color management Most color shifts that you accomplish in Photoshop have an impact on your monitor's rendition of colors and hue. You can avoid this color shift by using an approach called color management, which shifts image colors to match a reference monitor. The most popular type of monitor is called a color spectrophotometer, or a colorimeter. Although it's a costly investment, a color spectrophotometer is worth it. There are four color spaces that can be rendered on a screen, and each color space represents a different color version of a source image. The one most commonly used in printing is called the RGB color space. The other three are labeled HSL, CMYK, and Lab. These color spaces are based on the technical properties of photographic materials. Although we explain more about the RGB color space in the upcoming sections, we explain the other three in Book II Chapter 6. RGB color space If you're creating Web graphics, you need to understand the RGB color space. The reason is that color-managed web graphics, which use the PNG (Portable Network Graphics) format, must be stored in the RGB color space. If you're working in Photoshop, you can convert an RGB-based image to a CMYK color space by using the Convert to CMYK Colors command. You can also convert a CMYK-based image to the RGB color space by using the Convert to RGB Colors command. In the past, converting color images to CMYK was a fairly complicated process and required special computer systems. Today's color management systems allow you to convert directly from the RGB color space to the CMYK color space.

to any other rational mind. To the extent defendant contends the instruction was incomplete, the argument is not persuasive. Defendant points out the instruction omitted the phrase "or reason which amount[ed] to something more than a mere hope." However, the trial court clearly explained that it was an element that defendant had to prove by a preponderance of the evidence and that to meet its burden, defendant had to establish the existence of a reasonable doubt. The instruction also properly instructed the jury that defendant had the burden of proof by a preponderance of the evidence on the voluntariness of the statement. We do not find error in this regard. Relying on *People v. McKissick*, 414 Ill. 168 (1953), defendant next argues the trial court erred in failing to instruct the jury that he could not be convicted upon a confession not corroborated by other evidence. In *McKissick*, the supreme court held that "to warrant a conviction on a confession evidence corroborating the statement has to be introduced and not just evidence corroborating the other aspects of the crime." *McKissick*, 414 Ill. at 180. Defendant insists the trial court should have instructed the jury that, in order to find defendant guilty, it had to find the evidence -10- No. 2--07--0440 corroborating his statements was sufficient to corroborate the admissions as a whole. He argues that the only corroborating evidence came from the State's expert and that this was insufficient to meet the burden of proof for first degree murder. The State responds that the record does not support defendant's argument. Under section 115--4 of the Code of Criminal Procedure (Code) (725 ILCS 5/115--4 (West 2006)), the jury was instructed to consider "all of the evidence" in making its determination of guilt. We do not find the trial court's failure to instruct the

Q: How to use text in the statement in SSRS? I wanted to create some kind of automation with SSRS. I wanted that when user drags an entry in a column in a tablix in SSRS, then text should appear in the columns "sugestao" and "issoimpropente" I created a macro and i made an edit statement inside it but nothing happened. I wanted that when user drags an entry in a column in a tablix in SSRS, then text should appear in the columns "sugestao" and "issoimpropente". Here is the screenshot of the "Test" Report. I wanted that the table looks like this: I have the idea of creating a text box and drag the text to "sugestao" or "issoimpropente" and the text should appear in the column of "sugestao" or "issoimpropente". But i'm not sure of how to do it. A: You can use a Data Region to accomplish this. Select the rectangle in the table cell and click on the text on the Format Tab, go to Data Region and select "Text Box". You can then drag the cell to where you wish to have the text appear and the Text Box will be added to that cell and it will fill the size of the cell you have dragged it to. See here for more information about this: And here is another example, that will show you where to add the text: Let me know if it works for you. Rgds, Jan
